The ACS is increasing its efforts to get other groups to join in activities that are unfavorable to tobacco. These clips show a few of the results.

NATIONAL HEALTH FEDERATION BULLETIN San Francisco, California June 1961

"Mass of Evidence" Links Smoking, Health

Three Pennsylvania agencies associated with national health organizations today issued a joint statement asserting "a mass of statistical evidence" indicates

a link between smoking and health.

The agencies—the Pennsylvania Division of the American Cancer Society, the Pennsylvania Tuberculosis and Health Society and the Pennsylvania Heart Assn.—made a plea for a "concentrated education program initially aimed at teen-agers so that they may be in-formed about the effects of smoking before their habit patterns are established."

The statement cited a government report saying the death rate for smokers of all forms of tobacco was 32 per cent higher, and the death rate for smokers of cigarets 58 per cent higher, than that of non-smokers.

Statement was issued at the Health and Welfare Building at a press forum. Dr. Roland A. Loeb, of Lancaster, president of the Pennsylvania Division. American Cancer Society, and Dr. H. Roebling Knoch, of York, president of the Pennsylvania Heart Assn., joined Arthur Henninger, of Pine Grove, dent of the state Tuberculosis and Health

society, in issuing the statement. Evening News, Harrisburg., Pa., Friday, Mar. 17, 1961.

Cancer Fight Is Aimed At Smokers

A series of films aimed at dis-cauraging smoking will be shown in Lehigh County high schools under the joint sponsorship of the Lehigh County Cancer and Tuber-culosis Societies.

culoss Societies.

The programs will include the films, "To Smoke or Not to Smoke" and "The Cancer Challenge to Youth." Pamphlets on "Shall I Smoke" will also be distributed tributed.

The cancer society also re-ported it is conducting an edu-cational program among employ-es in business and industry.

Letters were sent to 150 firms, along with pamphlets to be given to employes.

The project encourages people to visit their doctors if certain symptons appear which might indicate cancer. It also urges peri-odic health examinations.

Schools Must Teach Perils of Smoking, **Education Chief Holds**

By JOHN MAGUIRE Times-Union Staff Writer

The State Education Commissioner said last night that schools have definite responsibility to teach pupils the ill effects of cigarette smoking.

Speaking at the Sheraton-Ten Eyck Hotel, Dr. James E. Allen, Jr., told about 100 health and education workers from throughout the state that young people must be kept informed "of current re-search findings relative to the use of tobacco in relation to cancer and other possible-ill effects."

Glving youngsters better. insight into the results of a decision to smoke or not to smoke is better, educationally, than lecturing, preaching or crusading to influence behavior, he said.

Allen addressed a dinner of a two-day conference on "Smoking and the Health of Youth." It was sponsored by the Empire State Health Council in cooperation with the State Education Department, the State Health Department, the State Division of the American Cancer Society and the State Charities Aid Association. The conference ends today.

STRAIGHT STUFF

High schol students can be persuaded not to start smoking if proper approaches are made, Daniel Horn, director of program evaluation of the American Cancer Society, said in an afternoon session at Chancellors Hall. Horn said studies 22,00

MASSILLON INDEPENDENT Massillon, Chio May 13, 1961

Program To Tell Danger Of Smoking

A program on eigaret smok-ing and its relationship to lung cancer and other conditions will be presented during chapel periods Tuesday morning at Washington high school. The pro-gram will be staged by the Stark County Tuberculosis and Health

association.

This is part of a county-wide project to bring the harmful etfects of smoking to the atten-tion of adults and young people. School officials and members of the Stark County unit of the American Cancer society are cooperating in the project.

RICHARD F. McCARTY, pub-lic information director for the TB: association, will review the findings of recent research stud-ies that reveal the highest inci-dence of lung cancer is found among men who are heavy smok-ers. Furthermore, a film start. ers. Furthermore, a film strip.
"To Smoke or Not To Smoke,"
produced by the American Cancer society, will be shown.

An exhibit illustrating the relationship between smoking and

lung cancer will be on display in the high school lobby, alerting students to the risk the smoking habit poses to their health.
